Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 102

6063 Aluminium alloy
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
Age hardening
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
Analysis
A three-dimensional analysis of the universal beam tandem rolling process. Part I. Deformation analysis, 59
ANSYS
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
Artificial neural networks
Extrapolative prediction of the hot strength of austenitic steels with a combined constitutive and ANN model, 84
Atomization
Application of mathematical simulation and the factorial design method to the optimization of the atomization stage in the spray forming of a Cu–6% Zn alloy, 221

Backward extrusion
Calculation method of the press force in a round shaped closed-die forging based on similarities to indirect extrusion, 230
Ball-burnishing process
The effects of initial burnishing parameters on non-ferrous components, 115
Bending model
Modeling and optimization of the sequential brakeforming processes, 153
Bending process
Multi-objective optimization of sequential brakeforming processes, 266
BK-7 glass
An ELID-cutting saw, 208
Burnishing ball diameter
The effects of initial burnishing parameters on non-ferrous components, 115

C-coated SiC fiber
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Central burst defects
The prediction of central burst defects in extrusion and wire drawing, 19
Ceramic composite
Plasma spray coating of fly ash pre-mixed with aluminium powder deposited on metal substrates, 9
Ceramic injection molding
Warping evolution of injection-molded ceramics, 14
Changing channel extrusion
Finite element simulation of a new deformation type occurring in changing-channel extrusion, 30
Closed-die forging
Calculation method of the press force in a round shaped closed-die forging based on similarities to indirect extrusion, 230
CNC
CNC incremental sheet forming of an axially symmetric specimen and the locus of optimization, 164
Co-extrusion
The co-extrusion of metal-sheathed high-temperature superconductors, 193
CO_2 laser welding
Parametric analysis of the pulsed Nd:YAG laser seam-welding process, 40
Composite
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90
Computer simulation
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
Elasto-plastic solutions for spring-back angle of pipe bending using local induction heating, 103
Conjugate-gradient method
Solution of the equations of rigid–plastic FE analysis by shifted incomplete Cholesky factorisation and the conjugate gradient method in metal forming processes, 70
Consolidation
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Constitutive model
Extrapolative prediction of the hot strength of austenitic steels with a combined constitutive and ANN model, 84
ε-constraint method
Multi-objective optimization of sequential brakeforming processes, 266
Core
The co-extrusion of metal-sheathed high-temperature superconductors, 193
Cu–6% Zn alloy
Application of mathematical simulation and the factorial design method to the optimization of the atomization stage in the spray forming of a Cu–6% Zn alloy, 221
Cylindrical housing
Three-dimensional rigid-plastic finite-element analysis of the isothermal precision forging of a cylindrical housing, 188

Deformation
A three-dimensional analysis of the universal beam tandem rolling process. Part I. Deformation analysis, 59
Deformation
Warping evolution of injection-molded ceramics, 14
The co-extrusion of metal-sheathed high-temperature superconductors, 193

Elsevier Science S.A.
PII: S0924-0136(00)00510-0

Diamond tools
Machining of an aluminum/SiC composite using diamond inserts, 25
Diffusion bonding
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Dislocation generation
Dislocation generation in GaAs crystals grown by the vertical gradient freeze method, 179
Double blanking
Assessment of influence of some process parameters on sheet metal blanking, 249
Drawing of a thin-wall tube
A graphical description of shear stress in the drawing of a thin-wall tube with a conical die, 174
Ductile fracture criterion
The prediction of central burst defects in extrusion and wire drawing, 19
Ductility
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
Dynamic-recrystallisation
Extrapolative prediction of the hot strength of austenitic steels with a combined constitutive and ANN model, 84

EDM
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90
EDM blind-hole drilling
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90
Effective parameters
Finite element analysis of effects of parameters on in-plane bending process of strip metal, 78
Elasto-plastic FEM
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
Elasto-plastic theory
Elasto-plastic solutions for spring-back angle of pipe bending using local induction heating, 103
Electrical discharge machining
Optimization of the electrical discharge machining process based on the Taguchi method with fuzzy logics, 48
Electrode wear rate
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90
Electrolytic in-process dressing
An ELID-cutting saw, 208
Electromagnetic confinement and shaping
Electromagnetic confinement and shaping for a plate-form part, 109
Electromagnetic pressure
Electromagnetic confinement and shaping for a plate-form part, 109
ELID-cutting saw
An ELID-cutting saw, 208
Equal-cross-section lateral extrusion
Finite element simulation of a new deformation type occurring in changing-channel extrusion, 30
Explicit finite element
Finite element analysis of the hydromechanical deep-drawing process of tapered rectangular boxes, 1
Extrapolation
Extrapolative prediction of the hot strength of austenitic steels with a combined constitutive and ANN model, 84
Extrusion
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
The prediction of central burst defects in extrusion and wire drawing, 19

Fatigue
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
Finite element analysis
Assessment of influence of some process parameters on sheet metal blanking, 249
Stretch bending of aluminium extrusions for car bumpers, 241
Three-dimensional rigid-plastic finite-element analysis of the isothermal precision forging of a cylindrical housing, 188
Finite element modeling
Finite element modeling of sheet-metal blanking operations with experimental verification, 257
Finite element simulation
Finite element simulation of a new deformation type occurring in changing-channel extrusion, 30
Finite strain theory
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
Fly ash
Plasma spray coating of fly ash pre-mixed with aluminium powder deposited on metal substrates, 9
Forming locus
CNC incremental sheet forming of an axially symmetric specimen and the locus of optimization, 164
Fracture
The co-extrusion of metal-sheathed high-temperature superconductors, 193
French–Preston law
An ELID-cutting saw, 208
Friction
An experimental study of the lubrication behavior of A5 glass lubricant by means of the ring compression test, 138
Fuzzy logics
Optimization of the electrical discharge machining process based on the Taguchi method with fuzzy logics, 48

GaAs
Dislocation generation in GaAs crystals grown by the vertical gradient freeze method, 179
Glass lubricant
An experimental study of the lubrication behavior of A5 glass lubricant by means of the ring compression test, 138

Hot strength
Extrapolative prediction of the hot strength of austenitic steels with a combined constitutive and ANN model, 84
Hydro-bulge forming
The development of integral hydro-bulge forming (IHBF) process and its numerical simulation, 168
Hydromechanical deep-drawing
Finite element analysis of the hydromechanical deep-drawing process of tapered rectangular boxes, 1

In-plane bending
Finite element analysis of effects of parameters on in-plane bending process of strip metal, 78
Incremental forming
CNC incremental sheet forming of an axially symmetric specimen and the locus of optimization, 164
Induction heating
Elasto-plastic solutions for spring-back angle of pipe bending using local induction heating, 103
Interfacial reaction
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215

Isothermal precision forging
Three-dimensional rigid-plastic finite-element analysis of the isothermal precision forging of a cylindrical housing, 188

Lab-View
An ELID-cutting saw, 208
Local deformation
Stretch bending of aluminium extrusions for car bumpers, 241
Lode parameter
A graphical description of shear stress in the drawing of a thin-wall tube with a conical die, 174
Lubrication
An experimental study of the lubrication behavior of A5 glass lubricant by means of the ring compression test, 138

Machining
Machining of an aluminum/SiC composite using diamond inserts, 25
Magnetic flux density
Electromagnetic confinement and shaping for a plate-form part, 109
Material properties
Modeling and optimization of the sequential brakeforming processes, 153
Material removal rate
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90
Material shearing mechanisms
Finite element modeling of sheet-metal blanking operations with experimental verification, 257
Mathematical modeling
Modeling of solidification in twin-roll strip casting, 33
Maximum principal stress
Finite element simulation of a new deformation type occurring in changing-channel extrusion, 30
Mean stress
Finite element simulation of a new deformation type occurring in changing-channel extrusion, 30
Metal forming processes
Solution of the equations of rigid–plastic FE analysis by shifted incomplete Cholesky factorisation and the conjugate gradient method in metal forming processes, 70
Metal–matrix composites
Machining of an aluminum/SiC composite using diamond inserts, 25
Multi-objective optimization
Multi-objective optimization of sequential brakeforming processes, 266

Non-ferrous metals
The effects of initial burnishing parameters on non-ferrous components, 115
Numerical approach of visco-plasticity
Visco-plastic constitutive models of steel at high temperature, 143
Numerical simulation
The development of integral hydro-bulge forming (IHBF) process and its numerical simulation, 168

Optimization
Application of mathematical simulation and the factorial design method to the optimization of the atomization stage in the spray forming of a Cu–6% Zn alloy, 221

Parametric study
Assessment of influence of some process parameters on sheet metal blanking, 249
Pipe bending
Elasto-plastic solutions for spring-back angle of pipe bending using local induction heating, 103
Plasma spraying
Plasma spray coating of fly ash pre-mixed with aluminium powder deposited on metal substrates, 9
PMMA
An ELID-cutting saw, 208
Polishing
The design of an ultrasonic polishing tool by the transfer-matrix method, 122
Precipitation hardening
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
Process
Warping evolution of injection-molded ceramics, 14
Pulsed Nd:YAG laser welding
Parametric analysis of the pulsed Nd:YAG laser seam-welding process, 40

Reaction rate
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Rigid–plastic FEM
Solution of the equations of rigid–plastic FE analysis by shifted incomplete Cholesky factorisation and the conjugate gradient method in metal forming processes, 70
Rigid-plastic FEM
Finite element analysis of effects of parameters on in-plane bending process of strip metal, 78
Ring compression test
An experimental study of the lubrication behavior of A5 glass lubricant by means of the ring compression test, 138

Sapphire
An ELID-cutting saw, 208
Semiconductors
Dislocation generation in GaAs crystals grown by the vertical gradient freeze method, 179
Sequential brakeforming processes
Modeling and optimization of the sequential brakeforming processes, 153
Sheet metal blanking
Assessment of influence of some process parameters on sheet metal blanking, 249
Shifted incomplete Cholesky factorisation
Solution of the equations of rigid–plastic FE analysis by shifted incomplete Cholesky factorisation and the conjugate gradient method in metal forming processes, 70
Simulation
Application of mathematical simulation and the factorial design method to the optimization of the atomization stage in the spray forming of a Cu–6% Zn alloy, 221
Single crystals growth
Dislocation generation in GaAs crystals grown by the vertical gradient freeze method, 179
Small deformation theory of plasticity
Assessment of influence of some process parameters on sheet metal blanking, 249
Solidification
Modeling of solidification in twin-roll strip casting, 33
Spray forming
Application of mathematical simulation and the factorial design method to the optimization of the atomization stage in the spray forming of a Cu–6% Zn alloy, 221
Spring-back angle
Elasto-plastic solutions for spring-back angle of pipe bending using local induction heating, 103
Springback
Stretch bending of aluminium extrusions for car bumpers, 241

Stability and applicability
Solution of the equations of rigid–plastic FE analysis by shifted incomplete Cholesky factorisation and the conjugate gradient method in metal forming processes, 70
Steel
An ELID-cutting saw, 208
Steel constitutive models
Visco-plastic constitutive models of steel at high temperature, 143
Strain hardening
Uniaxial tensile behaviour of ZM-21 magnesium alloy at room temperature, 56
Modeling and optimization of the sequential brakeforming processes, 153
Stress analysis
A three-dimensional analysis of the universal beam tandem rolling process. Part II: Stress analysis, 65
Stretch bending rig
Stretch bending of aluminium extrusions for car bumpers, 241
Strip casting
Modeling of solidification in twin-roll strip casting, 33
Strip metal
Finite element analysis of effects of parameters on in-plane bending process of strip metal, 78
Superconductor
The co-extrusion of metal-sheathed high-temperature superconductors, 193
Superplastic flow
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Surface finish
The effects of initial burnishing parameters on non-ferrous components, 115
Surface hardness
The effects of initial burnishing parameters on non-ferrous components, 115
Surface roughness
Blind-hole drilling of Al_2O_3/6061Al composite using rotary electro-discharge machining, 90

Taguchi method
Optimization of the electrical discharge machining process based on the Taguchi method with fuzzy logics, 48
Tandem rolling
A three-dimensional analysis of the universal beam tandem rolling process. Part I. Deformation analysis, 59
A three-dimensional analysis of the universal beam tandem rolling process. Part II: Stress analysis, 65
Tapered rectangular box
Finite element analysis of the hydromechanical deep-drawing process of tapered rectangular boxes, 1
Tensile behaviour
Uniaxial tensile behaviour of ZM-21 magnesium alloy at room temperature, 56
Tensile strength
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234
The figure of shear stress
A graphical description of shear stress in the drawing of a thin-wall tube with a conical die, 174
Thermal stresses in casting processes
Visco-plastic constitutive models of steel at high temperature, 143
Thermo-mechanically coupled
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 28
Thin edge cutting blade
Wear characteristics and mechanisms of a thin edge cutting blade, 203
Thin-walled cup
Computer simulation of the deep extrusion of a thin-walled cup using the thermo-mechanically coupled elasto-plastic FEM, 128
Ti–15V–3Cr alloy
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Titanium matrix composites
Processing and interface stability of SiC fiber reinforced Ti–15V–3Cr matrix composites, 215
Tool life
Wear characteristics and mechanisms of a thin edge cutting blade, 203
Transfer-matrix method
The design of an ultrasonic polishing tool by the transfer-matrix method, 122
Twin-roll
Modeling of solidification in twin-roll strip casting, 33

Ultrasonic vibration
The design of an ultrasonic polishing tool by the transfer-matrix method, 122
Unequal compressing
Finite element analysis of effects of parameters on in-plane bending process of strip metal, 78
Universal beam
A three-dimensional analysis of the universal beam tandem rolling process. Part I. Deformation analysis, 59
A three-dimensional analysis of the universal beam tandem rolling process. Part II: Stress analysis, 65

Vertical gradient freeze method
Dislocation generation in GaAs crystals grown by the vertical gradient freeze method, 179
Vessel
The development of integral hydro-bulge forming (IHBF) process and its numerical simulation, 168
Von Mises yield criterion
Finite element modeling of sheet-metal blanking operations with experimental verification, 257

Warpage
Warping evolution of injection-molded ceramics, 14
Wear
Machining of an aluminum/SiC composite using diamond inserts, 25
Wear characteristics and mechanisms of a thin edge cutting blade, 203
Wire drawing
The prediction of central burst defects in extrusion and wire drawing, 19

Yield strength
Influence of aging parameters on the mechanical properties of 6063 aluminium alloy, 234

ZM-21 magnesium alloy
Uniaxial tensile behaviour of ZM-21 magnesium alloy at room temperature, 56
